BLUE BIRD

2088789

## SERVICE UPDATE

DATE: November 7, 1995

SUBJECT: ANTIFREEZE APPLICATION

The type of antifreeze initially provided by Blue Bird is mandated by the chassis/engine manufacturer. Subsequent additions or re-fills of antifreeze by distributors and/or customers must also match the correct antifreeze required by the chassis/engine manufacturer. The table below provides the required antifreeze for each chassis/engine application.

APPLICATION	VENDOR AND VENDOR PART NO	ANTIFREEZE
Blue Bird Chassis (All American, TC/2000, Q-Bus, CS & Wanderlodge) SBCV Ford & International (Navistar) GMCV-Prior to 1996 model year Color: Blue	Fleetguard CC 2801	Antifreeze, Low Silicate, Ethylene Glycol Base w/DCA4, Blue Premix 50/50  2088789
	Fleetguard CC 2701	Antifreeze, Low Silicate, Ethylene Glycol Base w/DCA4, Blue Concentrate  1735844 1722297 - not for cust.
GMCV w/diesel engine Beginning 1996 model units Color: Red	Texaco 7998	Antifreeze, Long Life, Heavy Duty, Red, Premix 50/50
	Texaco 7997	Antifreeze, Long Life, Heavy Duty, Red, Concentrate
GMCV w/gas engine Beginning with 1996 model units Color: Orange	Texaco 7985	Antifreeze, Long Life, Orange, Premix 50/50
	Texaco 7984	Antifreeze, Long Life, Orange, Concentrate
Micro, Mini, GP wide body Beginning Jan 1, 1996 Color: Orange	Texaco 7985	Antifreeze, Long Life, Orange, Premix 50/50
	Texaco 7984	Antifreeze, Long Life, Orange, Concentrate

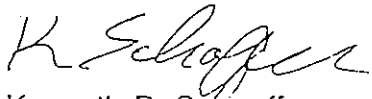

BLUE BIRD BODY COMPANY

P.O. Box 937 • Fort Valley, Georgia 31030 • (912) 825-2021

**CAUTION:** Different antifreeze types can not be mixed. (Must use red w/red, blue w/blue and orange w/orange).

If incorrect antifreeze has been installed, system must be drained, flushed and correct antifreeze installed. Be sure to thoroughly purge the heater core and block as well as the radiator before installing new premix antifreeze. Either use premix or mix concentrate with water for desired freeze protection, never add pure concentrate to system, a 50% - 50% mixture of antifreeze to water provides protection to -34 degrees F. A 55% - 45% mixture of antifreeze to water provides protection to -40 degrees F. Also, follow chassis/engine manufacturers maintenance recommendations for cooling system.

Sincerely,

Kenneth P. Schaeffer  
Manager, Product Service

# TROUBLE SHOOTING ROOM OR CYLINDER CREEPS OUT AFTER ROOM IS FULLY RETRACTED DUAL CYLINDER ROOM EXTENSION WITH SYNCHRONIZING CYLINDER

NOTE: The synchronizing cylinder will not cause the room to creep out. DO NOT replace the synchronizing cylinder.

- i. If only one cylinder or one side of the room creeps out, replace the cylinder that creeps out.
- ii. If both sides of the room or both cylinders creep out, it may be the extend solenoid valve for that room, one or both cylinders, or the room extension manifold check valve.
  - A. If the room creeps out one inch or less, it is probably the check valve.
  - B. If the room creeps out more than one inch, it is probably the extend solenoid valve or a cylinder.

- 1. Extend the room fully,
- 2. Open the extend solenoid valve "T" Handle, then the retract solenoid valve "T" Handle.
- 3. Remove Hose A from the room extension manifold. CAP THE FITTING IN THE MANIFOLD.
- 4. Close the "T" Handles on both solenoid valves.
- 5. Bump the room control switch toward extend several times while watching for fluid to come out of the end of Hose A. Do not allow the pump to build pressure while performing this test. NOTE: Some fluid will come from the hose end the first several times the room control switch is bumped until the room is solidly extended. If fluid continues to come from the end of the hose, a room cylinder needs to be replaced. If fluid stops coming out of the hose, replace the extend solenoid valve for that room.

4502514

**CAUTION: DO NOT LOOK INTO THE HOSE END OR POINT THE HOSE AT ANY BODY PARTS WHILE PERFORMING THIS TEST.**

- 6. If the test shows a bad cylinder, remove Hose B from the synchronizing cylinder. Bump the room control switch toward extend several times. If fluid comes from Hose B, replace the cylinder connected to Hose B. If no fluid comes from Hose B, replace Hose B and remove Hose C from the synchronizing cylinder. Bump the room control switch toward extend several times. If fluid comes from Hose C, replace the cylinder connected to Hose C. If no fluid comes from Hose C, replace the extend solenoid valve.
